Art Unit: 3632

This is the second office action for serial number 10/038,834, Electronic Equipment Mounting Angle Varying Apparatus, filed on May 5, 1997.

Election/Restriction

Applicant has elected species I drawn to figures 1-28 and claims 1-11.

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy of the Foreign applications have been filed in this application.

Claim Rejections - 35 USC § 112

Claims 2-4, and 7-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2, line 9, "the leading end" lacks proper antecedent basis.

Claim 7, line 7, "the shaft bearing surface" lacks proper antecedent basis.

Claim 8, lines 8 and 11, recite "a third cylindrical surface" and "a fourth cylindrical surface", respectively and lines 14 and 17, recite "a third shaft bearing portion" and "a fourth shaft bearing portion" without setting fourth --a first and second cylindrical surface-- or --a first and second shaft bearing portion--.

Art Unit: 3632

Claim 9, lines 5 and 6, "the mounting fitting shaft bearing portion" lacks proper antecedent basis.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,141,196 to Arnold et al., hereinafter Arnold. The present invention reads on Arnold as follows: Arnold discloses an apparatus comprising a base member (17), a mounting member (16) and an arm member (31). The base member is mounted at a place where electronic equipment is installed. The mounting member is mounted and supported by the base member so as to freely swing about a horizontal base support shaft axis. The arm member is supported by the mounting member so as to freely swing about a mounting member support shaft axis setting the mounting angle of the electronic equipment by latching the base member (via 23). The electronic equipment is mounted at a prescribed angle.

Art Unit: 3632

Allowable Subject Matter

Claims 2-4, and 7 would be allowable if rewritten to overcome the rejections under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Claim 5, 6, and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dynesen 4,259,568; Henneberg 4,624,433; and Kobayashi 4,776,553 teach electronic equipment mounting angle varying apparatus having mounting and base members.
